

border-image

Images can be assigned to borders based on a single image file.
The `border` property must be set.

Compatibility

`-webkit-border-image`

`border-image`

Not supported by Internet Explorer, Opera Mini and IE Mobile. For detailed compatibility info see caniuse.com. For a better understanding of the admittedly difficult syntax see border-image.com.

Firefox 15+ Safari 6+, Chrome 15+ Opera 15+

iOS 3.2+ Android 2.1+ Blackberry 7+

General description

`border-image:` ¹`url(image.png)`² `3`³ `/ 5px`⁴ `round`

Toggle highlighting ☐ 1

- ¹ The path to the background image file.
- ² Sets the size of the areas that are taken to draw border. Can consist of up to four values each representing one side of the border. General **shorthand rule** applies.
- ³ *(Optional, separated by a slash)* Border width. Can be different from value ² and the `border-width` property set. General **shorthand rule** applies.
- ⁴ *(Optional, separated by a slash)* Specifies how the image is fitted to the four sides of the border. Possible values are: `stretch` (default), `round` and `repeat` (see examples). If one value is set it is taken for all four sides of the border, with two value the first applies to top/bottom and the second to left/right. This value has no effect on the corners.

Examples

Tiled border image with matrix applied

```
border-image: url(image.png) 19 2round
```

Toggle highlighting ☐ 1

- 1 The area taken for all the four sides is 9 pixels high/wide
- 2 The background image is tiled and fitted (round).

Border image with matrix applied and two sides stretched

```
border-image: url(image.png) 17 215 3round stretch
```

Toggle highlighting ☐ 1

- 1 The top and bottom parts of the background image are 7 pixels high.
- 2 The left and right parts are 15 pixels wide.
- 3 The top/bottom areas of the border image are tiled and fitted (round), the left/right areas are stretched to the whole height (stretch).

General description

| | | | |
|------------------------|------------------|---|-------------------|
| border-radius: | ¹ 8px | / | ² 13px |
| Toggle highlighting 1 | | | |

- ¹ The radius of the quarter circles that form the shapes of the corners.
- ² (*Optional, separated by a slash*) The vertical radius, which results in a quarter ellipse when different from the horizontal radius.

Examples

Four values given

- 1 Top left corner. 2 Top right corner. 3 Bottom right corner. 4 Bottom left corner.

Three values given

- 1 Top left corner. 2 Top right **AND** bottom left corner. 3 Bottom right corner.

Two values given

Toggle highlighting  1

- 1 Top left **AND** bottom right corner.
- 2 Top right **AND** bottom left corner.

One value given

border-radius: ¹8px

Toggle highlighting  1

- 1 All four corners rounded equally.

Elliptical corners, two values given

With the addition of a slash it is possible to set the horizontal and vertical radii separately.

border-radius: ¹8px / ²13px

Toggle highlighting  1

- 1 All horizontal radii set equally.
- 2 All vertical radii set equally.

Elliptical corners, four values given

Three and four values on each side of the slash follow the notation given above (without slash).

- 1 Horizontal radii for top left **AND** bottom right corners.
- 2 Horizontal radii for top right **AND** bottom left corners.
- 3 Vertical radii for top left **AND** bottom right corners.
- 4 Vertical radii for top right **AND** bottom left corners.
