# @font-face

Allows the use of online fonts. For examples please see the headlines (e.g. the orange ones) at css3files.com. They are all done using @font-face.

Compatibility **General description** **Further reading**

Comments

Compatibility

`@font-face`

Not supported by Opera Mini. For detailed compatibility info see**caniuse.com**.

Firefox 4+ | Safari 5+, Chrome 10+ | Internet Explorer 9+ | Opera 11+
iOS 4.2+ | Android 2.2+ | Blackberry 7+ | IE Mobile 10+

General description

```
@font-face {

        font-family: "FontName" ;

        src: url('fontfile.eot') ;

        src: url('fontfile.eot?iefix') format('eot') ,

        url('fontfile.svg#FontName') format('svg') ,

        url('fontfile.ttf') format('truetype') ,

        url('fontfile.woff') format('woff') ;

}
```

Toggle highlighting 1

1 The name of the font for the further usage in the stylesheet at the `font-family` property. If the font should be assigned to all `<h2>` headlines for example you have to write `h2 { font-family: "FontName", sans-serif }`. Can be choosen freely.

2 *Optional.* The `eot` fontfile. Can be omitted if you don`t want to support Internet Explorer prior to version 9 (including semicolon).

3 *Optional.* Can also be omitted for Internet Explorer < 9. `?iefix` prevents IE6 from interpreting all of the following. If the whole IE family (6 to 9) should be supported, **2** and **3** are needed.

4 *Optional.* Can be omitted if iPad versions prior to iOS 4.2 shouldn't be supported. `FontName` is the same as at **1**.

5 The `ttf` fontfile. Necessary to support (Mobile) Safari and Opera.

6 The `woff` fontfile for all modern browsers (best choice).
